

Music Management and Discovery

Memotrax can help you manage music in a way that is compatible with your own tastes. Our engines are the basis of two music-management systems: one that allows you to manage the music on your PC, and another that allows you to search the entire Web for interesting songs. Our goal is to make music management and discovery a natural and enjoyable experience, even when the number of songs involved is immense.

Learn Your Personal Musical Taste

It's like having your own personal music guide. Personalized learning creates a more human feel, adding even greater richness and depth to your recommendations. It also helps you explore those parts of music space that you would find most interesting.

Rich Subjective Analysis

Memotrax engines are based on several kinds of information, including acoustic analysis and collaborative filtering, along with personalized learning to tune these to your tastes.

Powerful Objective Analysis

Analyzes music's wave patterns and acoustic DNA based on dozens of objective factors. Not restricted by tags. No need to access a central database. Simple. Smart. Automated. And incredibly powerful.
